

Skills / Define

Define phase /spec

spec-driven-development

Creates specs before coding. Writes a PRD covering objectives, commands, structure, code style, testing, and boundaries when requirements are unclear, ambiguous, or only exist as a vague idea.

USE WHEN Starting a new project, feature, or significant change.

#spec #planning #requirements

Install just this skill

Grab it on its own via the open [skills CLI](#), or install the whole pack.

THIS SKILL ONLY

```
$ npx skills add addyosmani/agent-skills --skill spec-driven-development
```

ALL SKILLS

```
$ npx skills add addyosmani/agent-skills
```

How this skill is structured

Every skill follows the same anatomy - a workflow the agent follows, not a doc it reads.

01	Overview	What this skill does
02	When to Use	Triggering conditions

03	Process	Step-by-step workflow
04	Rationalizations	Excuses + rebuttals
05	Red Flags	Signs something's wrong
06	Verification	Evidence requirements

[Read the full SKILL.md ↗](#)

Define phase

Clarify what to build before a line of code is written.

Command

/spec

[See the full lifecycle →](#)

More in the Define phase

Define

interview-me

One-question-at-a-time interview that extracts what you actually want.

The ask is underspecified, or you invoke "interview me" / "grill me".

Define

idea-refine

Structured divergent/convergent thinking to sharpen a vague concept.

You have a rough idea that needs exploration and stress-testing.

agent-skills

Production-grade engineering skills for AI coding agents. Encode senior-engineer workflows across the full lifecycle.

```
npx skills add addyosmani/agent-skills
```
